

Enabling TwoStep Authentication

Add two-factor authentication to protect your DirectAdmin account.

Two-step authentication (2FA) adds a second verification step beyond your password, significantly improving account security.

Enable 2FA

1. Go to **Advanced Features → Two-Step Authentication**.
2. Choose an authenticator app method (Google Authenticator, Authy, etc.).
3. Scan the QR code with your authenticator app.
4. Enter the verification code to confirm setup.
5. Save backup codes in a secure location.

Logging in with 2FA

After entering your password, provide the six-digit code from your authenticator app. Codes rotate every 30 seconds. If you lose access to your app, use a backup code or contact DanumHost support for account recovery.
