Using the Order Basket

Review hosting, domains, and add-ons at /order/basket before checkout.

The **basket** collects everything in one order before payment.

Storefront basket

1. After configuring products, open `/order/basket`.
2. Adjust domain registrations or hosting options using the forms provided.
3. Visit `/order/basket/addons` to add optional extras.
4. Proceed to checkout when the totals look correct.

Changes

Removing items may require returning to the configure step. Start over from `/plans` if you need a completely different product.
